Brain MRI in Multiple Sclerosis

Anne G. Osborn, M.D.
Professor of Radiology
University of Utah School of Medicine
Figure 2  MRI Axial FLAIR scan showing white matter foci of increased signal intensity surrounding cavitating areas characteristic of long-standing MS.
Figure 3  MRI axial FLAIR scan of deep periventricular foci of increased signal intensity surrounding cavitating areas.
Figure 4  MRI sagittal FLAIR scan with classic calloseptal deep periventricular foci perpendicular to ventricle surface classic for Dawson fingers.
